Tuff-Tube Installation Instructions

1. Slide Tuff-Tube liner into spouting until metal collar is flush with spouting flange.
2. Proceed to other end of spouting and trim off excess Tuff-Tube material flush with spouting flange. Tuff-Tube material can be cut using sharp utility knife or other cutting instrument.
3. Lined spouting section is now ready for installation with the metal collared end of the Tuff-Tube to be placed on the upside of the product flow thru the spouting.
